

Recombinant Human MYCN Protein (Full length), N-GST-tagged

Cat. No. MYCN-35H **Lot. No.** (See product label)

SPECIFICATION

Product Overview	Recombinant full-length human MYCN was expressed by baculovirus in Sf9 insect cells using an N-terminal GST tag.
Species	Human
Source	Sf9 Cells
ProteinLength	Full Length
Description	MYCN is a basic helix-loop-helix transcription factor first identified in neuroblastoma and is a member of the MYC proto-oncogene family along with MYCC and MYCL. MYC proteins affect transcription of many genes thus regulating proliferation, metabolism, apoptosis, differentiation and immune surveillance. Ubiquitin-dependent proteasome degradation of MYCN in neural stem/progenitor cells is required for the arrest of proliferation and the start of differentiation. Enhanced USP7 expression is seen in neuroblastoma patients with poorer prognosis due to deubiquination of MYCN by USP7, thereby preventing degradation of MYCN. Overexpression of MYCN is closely related with high-cancers, early distant metastasis, and poor clinical prognosis.
Molecular Mass	Observed MW: ~95 kDa. Calculated MW: ~80 kDa.
Purity	The purity of MYCN was determined to be > 85 % by densitometry.

 Tel: 1-631-559-9269 1-516-512-3133

 45-1 Ramsey Road, Shirley, NY 11967, USA

Stability	One year at -70 centigrade from date of shipment.
Storage	Store product at -70 centigrade. For optimal storage, aliquot target into smaller quantities after centrifugation and store at recommended temperature. For most favorable performance, avoid repeated handling and multiple freeze/thaw cycles.
Concentration	0.1 µg/µL
Storage Buffer	Recombinant protein stored in 50mM Tris-HCl, pH 7.5, 150mM NaCl, 10mM glutathione, 0.1mM EDTA, 0.25mM DTT, 25% glycerol.
Shipping	Dry ice
GENE INFORMATION	
Gene Name	MYCN v-myc myelocytomatosis viral related oncogene, neuroblastoma derived (avian) [Homo sapiens (human)]
Official Symbol	MYCN
Synonyms	MYCN; v-myc myelocytomatosis viral related oncogene, neuroblastoma derived (avian); NMYC, v myc avian myelocytomatosis viral related oncogene, neuroblastoma derived; N-myc proto-oncogene protein; bHLHe37; N myc; pp65/67; oncogene NMYC; neuroblastoma MYC oncogene; class E basic helix-loop-helix protein 37; neuroblastoma-derived v-myc avian myelocytomatosis viral related oncogene; v-myc avian myelocytomatosis viral related oncogene, neuroblastoma derived; NMYC; ODED; MODED; N-myc;
Gene ID	4613
mRNA Refseq	NM_005378
