

Active Recombinant Human VNN2 Protein (Extracellular Domain, Gln23-Ser492), C-Fc-tagged

Cat. No. VNN2-06H **Lot. No.** (See product label)

SPECIFICATION

Product Overview

The recombinant human VNN2-Fc fusion is expressed as a 697 amino acid protein consisting of Gln23-Ser492 region of VNN2 (Uniprot Accession #O95498) and a C-terminal Fc from human IgG1, which exists as a dimer under non-reducing conditions.

Calculated PI: 6.34

Calculated Extinction Coefficient (M-1 cm-1, at 280nm): 107690

Species Human

Source Human Cells

ProteinLength Gln23-Ser492

Description

This gene product is a member of the Vanin family of proteins that share extensive sequence similarity with each other, and also with biotinidase. The family includes secreted and membrane-associated proteins, a few of which have been reported to participate in hematopoietic cell trafficking. No biotinidase activity has been demonstrated for any of the vanin proteins, however, they possess pantetheinase activity, which may play a role in oxidative-stress response. The encoded protein is a GPI-anchored cell surface molecule that plays a role in transendothelial migration of neutrophils. This gene lies in close proximity to, and in same transcriptional orientation as two other vanin genes on chromosome 6q23-q24. Alternatively spliced transcript variants encoding different isoforms have been described for this gene.

Endotoxin	<0.1 EU/μg of purified recombinant protein determined by the LAL method
Purity	>95% judged by SDS-PAGE under reducing condition
Storage	The product is shipped at 4 centigrade. Upon receipt, centrifuge the vial briefly before opening. Store at -20 centigrade and the product is stable for 6 months. Avoid repeated freeze-thaw cycles.
Concentration	0.5 mg/mL
Storage Buffer	Sterile PBS pH7.4

Shipping

The product is shipped at 4 centigrade for immediate use.
