

Active Recombinant Human IL5RA Protein

Cat. No. IL5RA-241I **Lot. No.** (See product label)

SPECIFICATION

Product Overview	Recombinant Human IL5RA Protein without tag was expressed in CHO.
Species	Human
Source	CHO
Description	Interleukin-5 Receptor Alpha (IL-5RA), also known as CD125, belongs to the Type 5 subfamily in the type I cytokine receptor family. It is composed of a ligand-specific alpha subunit and a signal-transducing beta subunit shared by the receptors for IL-3 and GM-CSF. IL-5RA is mainly expressed on eosinophils and basophils, and plays important roles in the immunobiology of these cell types. It is reported that when stimulated by IL-5, eosinophils down-regulate surface IL-5RA expression to attenuate their IL-5 responsiveness. Elevated IL-5 production may induce immune cell infiltration which leads to allergic inflammation. IL-5RA has also been reported to promote the differentiation of basophils and B cells.
Form	Sterile Filtered White lyophilized (freeze-dried) powder.
Bio-activity	ED50 < 0.2 ng/mL, measured in a cell proliferation assay using TF-1 cells in the presence of 1 ng/mL human IL-5.
