

Active Recombinant Human ST3GAL1 Protein (AA 52-340), N-6×His/GFP tagged

Cat. No. ST3GAL1-05H Lot. No. (See product label)

SPECIFICATION

Product Overview	Recombinant Human ST3GAL1 Protein (AA 52-340) with N-6×His/GFP tag was expressed in HEK293.
Species	Human
Source	HEK293
ProteinLength	AA 52-340
Description	The protein encoded by this gene is a type II membrane protein that catalyzes the transfer of sialic acid from CMP-sialic acid to galactose-containing substrates. The encoded protein is normally found in the Golgi but can be proteolytically processed to a soluble form. Correct glycosylation of the encoded protein may be critical to its sialyltransferase activity. This protein, which is a member of glycosyltransferase family 29, can use the same acceptor substrates as does sialyltransferase 4B. Two transcript variants encoding the same protein have been found for this gene. Other transcript variants may exist, but have not been fully characterized yet.
