

Recombinant Human ST3GAL3 Protein (AA 60-375), N-6×His/GFP tagged

Cat. No. ST3GAL3-12H **Lot. No.** (See product label)

SPECIFICATION

Product Overview	Recombinant Human ST3GAL3 Protein (AA 60-375) with N-6×His/GFP tag was expressed in HEK293.
Species	Human
Source	HEK293
ProteinLength	AA 60-375
Description	The protein encoded by this gene is a type II membrane protein that catalyzes the transfer of sialic acid from CMP-sialic acid to galactose-containing substrates. The encoded protein is normally found in the Golgi apparatus but can be proteolytically processed to a soluble form. This protein is a member of glycosyltransferase family 29. Mutations in this gene have been associated with a form of autosomal recessive nonsyndromic cognitive disability as well as infantile epileptic encephalopathy. Multiple transcript variants encoding several different isoforms have been found for this gene.
