

Recombinant Human IFIT1 Protein, His-tagged

Cat. No. IFIT1-19H **Lot. No.** (See product label)

SPECIFICATION

Product Overview	Recombinant human IFIT1 protein with a His-tag was expressed in E. coli
Species	Human
Source	E.coli
Description	This gene encodes a protein containing tetratricopeptide repeats that was originally identified as induced upon treatment with interferon. The encoded protein may inhibit viral replication and translational initiation. This gene is located in a cluster on chromosome 10 with five other closely related genes. There is a pseudogene for this gene on chromosome 13. Alternatively spliced transcript variants encoding multiple isoforms have been observed.
Molecular Mass	The protein has a calculated MW of 68.2 kDa.
