

Synthetic Human Di-ubiquitin (K11-linked) Protein

Cat. No. UBA52-04H **Lot. No.** (See product label)

SPECIFICATION

Product Overview	Synthetic Human Di-ubiquitin (K11-linked) Protein
Species	Human
Source	Synthetic
Description	Ubiquitin is a highly conserved nuclear and cytoplasmic protein that has a major role in targeting cellular proteins for degradation by the 26S proteasome. It is also involved in the maintenance of chromatin structure, the regulation of gene expression, and the stress response. Ubiquitin is synthesized as a precursor protein consisting of either polyubiquitin chains or a single ubiquitin moiety fused to an unrelated protein. This gene encodes a fusion protein consisting of ubiquitin at the N terminus and ribosomal protein L40 at the C terminus, a C-terminal extension protein (CEP). Multiple processed pseudogenes derived from this gene are present in the genome.
