

Recombinant Human Arginase, Type II, His-tagged

Cat. No. ARG2-2576H **Lot. No.** (See product label)

SPECIFICATION

Product Overview	Recombinant human ARG2, fused to His-tag at N-terminus, was expressed in <i>E.coli</i> and purified by using conventional chromatography. MW =38.3kDa(353aa).
Species	Human
Source	E.coli
Description	Arginase is a manganese-containing enzyme which catalyzes the hydrolysis of arginine to ornithine and urea. It is the final enzyme of the urea cycle. At least two isoforms of mammalian arginase exist (types I and II) which differ in their tissue distribution, subcellular localization, immunologic cross-reactivity and physiologic function. The type II isoform is located in the mitochondria and expressed in extra-hepatic tissues, especially kidney. It is thought to play a role in nitric oxide and polyamine metabolism.
