

Recombinant Human renin, His-tagged

Cat. No. REN-223H **Lot. No.** (See product label)

SPECIFICATION

Product Overview	REN, 67-406aa, Human, His tag, E.coli
Species	Human
Source	E.coli
ProteinLength	67-406 a.a.
Description	Renin catalyzes the first step in the activation pathway of angiotensinogen--a cascade that can result in aldosterone release, vasoconstriction, and increase in blood pressure. Renin, an aspartyl protease, cleaves angiotensinogen to form angiotensin I, which is converted to angiotensin II by angiotensin I converting enzyme, an important regulator of blood pressure and electrolyte balance. Transcript variants that encode different protein isoforms and that arise from alternative splicing and the use of alternative promoters have been described, but their full-length nature has not been determined. Mutations in this gene have been shown to cause familial hyperproreninemia. Recombinant human REN protein, fused to His-tag at N-terminus, was expressed in E.coli.
