

Recombinant Human guanine nucleotide binding protein (G protein), beta polypeptide 3, His-tagged

Cat. No. GNB3-299H **Lot. No.** (See product label)

SPECIFICATION

Product Overview	GNB3, 1-340aa, Human, His tag, E.coli
Species	Human
Source	E.coli
ProteinLength	1-340 a.a.
Description	GNB3 is important regulator of alpha subunit, as well as of certain signal transduction receptor and effector. A single-nucleotide polymorphism (C825T) in this protein is associated with essential hypertension and obesity. This polymorphism is also associated with the occurrence of the splice variant GNB3-s, which appears to have increased activity. GNB3-s is an example of alternative splicing caused by a nucleotide change outside of the splice donor and acceptor sites. Additional splice variants may exist for this gene, but they have not been fully described. Recombinant human GNB3 protein, fused to His-tag at N-terminus, was expressed in E.coli.
