

Recombinant Human ST3 beta-galactoside alpha-2,3-sialyltransferase 5, His-tagged

Cat. No. ST3GAL5-335H **Lot. No.** (See product label)

SPECIFICATION

Product Overview	ST3GAL5, 83-418aa, Human, His tag, E.coli
Species	Human
Source	E.coli
ProteinLength	83-418 a.a.
Description	Ganglioside GM3 is known to participate in the induction of cell differentiation, modulation of cell proliferation, maintenance of fibroblast morphology, signal transduction, and integrin-mediated cell adhesion. The protein encoded by this gene is a type II membrane protein which catalyzes the formation of GM3 using lactosylceramide as the substrate. The encoded protein is a member of glycosyltransferase family 29 and may be localized to the Golgi apparatus. Mutation in this gene has been associated with Amish infantile epilepsy syndrome. Transcript variants encoding different isoforms have been found for this gene. Recombinant human ST3GAL5 protein, fused to His-tag at N-terminus, was expressed in E.coli .
