

Recombinant Human VAV1 Protein, His tagged

Cat. No. VAV1-341H **Lot. No.** (See product label)

SPECIFICATION

Product Overview	Recombinant Human VAV1 Protein (189-565 aa) with C-His tag was expressed in E.coli.
Species	Human
Source	E.coli
ProteinLength	189-565 aa
Description	This gene is a member of the VAV gene family. The VAV proteins are guanine nucleotide exchange factors (GEFs) for Rho family GTPases that activate pathways leading to actin cytoskeletal rearrangements and transcriptional alterations. The encoded protein is important in hematopoiesis, playing a role in T-cell and B-cell development and activation. The encoded protein has been identified as the specific binding partner of Nef proteins from HIV-1. Coexpression and binding of these partners initiates profound morphological changes, cytoskeletal rearrangements and the JNK/SAPK signaling cascade, leading to increased levels of viral transcription and replication. Alternatively spliced transcript variants encoding multiple isoforms have been observed for this gene.
