

Recombinant Human alpha-2-HS-glycoprotein, His-tagged

Cat. No. AHSG-565H **Lot. No.** (See product label)

SPECIFICATION

Product Overview	AHSG, 19-367aa , Human, His tag, E.coli
Species	Human
Source	E.coli
ProteinLength	19-367 a.a.
Description	AHSG, also known as fetuin-A, belongs to the fetuin class of plasma binding proteins. It is involved in several functions, such as endocytosis, brain development and the formation of bone tissue. It is commonly present in the cortical plate of the immature cerebral cortex and bone marrow hemopoietic matrix, and it has been postulated that it participates in the development of the tissues. It forms soluble complexes with calcium and phosphate and thus is a carrier of otherwise insoluble calcium phosphate. Recombinant human AHSG protein, fused to His-tag at N-terminus, was expressed in E.coli and purified by using conventional chromatography techniques.
Form	Liquid. 20mM Tris-HCl buffer (pH8.0) containing 10% glycerol 0.1M NaCl, 1mM DTT
