

Recombinant Human lysyl oxidase, His-tagged

Cat. No. LOX-608H **Lot. No.** (See product label)

SPECIFICATION

Product Overview	LOX, 169-417aa, Human, His tag, E.coli
Species	Human
Source	E.coli
ProteinLength	169-417 a.a.
Description	LOX is an extracellular copper enzyme that initiates the crosslinking of collagens and elastin. The enzyme catalyzes oxidative deamination of the epsilon-amino group in certain lysine and hydroxylysine residues of collagens and lysine residues of elastin. In addition to crosslinking extracellular matrix proteins, the encoded protein may have a role in tumor suppression. Defects in this gene are a cause of autosomal recessive cutis laxa type I (CL type I). Two transcript variants encoding different isoforms have been found for this gene. Recombinant human LOX protein, fused to His-tag at N-terminus, was expressed in E.coli.
