

Recombinant Human NFU1 iron-sulfur cluster scaffold homolog (*S. cerevisiae*), His-tagged

Cat. No. NFU1-665H **Lot. No.** (See product label)

SPECIFICATION

Product Overview	NFU1, 10-254aa Human, His tag, E.coli
Species	Human
Source	E.coli
ProteinLength	10-254 a.a.
Description	NFU1 is a protein that is localized to mitochondria and plays a critical role in iron-sulfur cluster biogenesis. This protein assembles and transfers 4Fe-4S clusters to target apoproteins including succinate dehydrogenase and lipoic acid synthase. Mutations in this gene are a cause of bmultiple mitochondrial dysfunctions syndrome-1, and pseudogenes of this gene are located on the short arms of chromosomes 1 and 3. Alternatively spliced transcript variants encoding multiple isoforms have been observed for this gene. Recombinant human NFU1 protein, fused to His-tag at N-terminus, was expressed in E.coli and purified by using conventional chromatography techniques.
