

Recombinant Human CSF1R, GST-tagged, Active

Cat. No. CSF1R-320H **Lot. No.** (See product label)

SPECIFICATION

Product Overview	Recombinant human FMS (539-end) was expressed by baculovirus in <i>Sf9</i> cells using an N-terminal GST tag. MW=76kDa.
Species	Human
Source	Sf9 Cells
Protein Length	539-end a.a.
Description	FMS is a proto-oncogene that encodes the tyrosine kinase transmembrane receptor for colony stimulating factor 1 (CSF1). FMS is homodimeric that contains a so-called kinase insert domain and is a member of the CSF1/PDGF receptor family of tyrosine-protein kinases. FMS mediates most if not all of the biological effects of CSF1 which control the production, differentiation, and function of cell of the monocyte/macrophage lineage. Mutations in FMS have been associated with providing sustained signals for cell growth and a predisposition to myeloid malignancy.
Sequence	593-end.
Applications	Kinase Assay, Western Blot.
Storage And Stability	Store product at -70°C . For optimal storage, aliquot target into smaller quantities after centrifugation and store at recommended temperature. For most favorable performance, avoid repeated handling and multiple freeze/thaw cycles.
