

Active Recombinant Human GSK3B protein, GST-tagged

Cat. No. GSK3B-326H Lot. No. (See product label)

SPECIFICATION

Product Overview	Recombinant Human GSK3B fused with GST tag at N-terminal was expressed in Insect cells.
Species	Human
Source	Insect Cells
Description	GSK3 β is a serine threonine protein kinase that was originally identified as the kinase that phosphorylate and inhibits glycogen synthase. GSK3 β is ubiquitously present in human tissues and implicated in the regulation of several physiological processes, including the control of glycogen and protein synthesis by insulin, modulation of the transcription factors AP-1 and CREB. Transient transfection of human GSK3 beta into Chinese hamster ovary cells stably transfected with individual human tau isoforms leads to hyperphosphorylation of tau at all the sites investigated with phosphorylation-dependent anti-tau antibodies.
