

Recombinant Mouse Mapk8, GST-tagged, Active

Cat. No. Mapk8-338M(Mouse) **Lot. No.** (See product label)

SPECIFICATION

Product Overview	Recombinant full-length mouse JNK1 was expressed by baculovirus in <i>Sf9 insect cell</i> using a N-terminal GST tag. MW = 71 kDa.
Species	Mouse
Source	Sf9 Cells
Description	JNK1 is a member of the MAP kinase group that is activated by dual phosphorylation at thr and tyr residues during exposure to stress such as UV irradiation. JNK1 binds to the c-Jun transactivation domain and phosphorylates it on Ser-63 and Ser-73. JNK1 has been shown to play an important role in disease processes. Activation of JNK1 results in defects in myotube viability and integrity leading to dystrophic myofiber destruction. JNK1 activity is also abnormally elevated in obesity and removal of JNK1 results in decreased adiposity and significantly improved insulin sensitivity.
Sequence	Full-length.
Applications	Kinase Assay, Western Blot.
Storage And Stability	Store product at -70°C. For optimal storage, aliquot target into smaller quantities after centrifugation and store at recommended temperature. For most favorable performance, avoid repeated handling and multiple freeze/thaw cycles.
