

Recombinant Human ApoE3

Cat. No. ApoE3-3562H Lot. No. (See product label)

SPECIFICATION

Product Overview	ApoE3
Species	Human
Source	E.coli
ProteinLength	317
Description	Chylomicron remnants and very low density lipoprotein (VLDL) remnants are rapidly removed from the circulation by receptor-mediated endocytosis in the liver. Apolipoprotein E, a main apoprotein of the chylomicron, binds to a specific receptor on liver cells and peripheral cells. ApoE is essential for the normal catabolism of triglyceride-rich lipoprotein constituents. The APOE gene is mapped to chromosome 19 in a cluster with APOC1 and APOC2. Defects in apolipoprotein E result in familial dysbetalipoproteinemia, or type III hyperlipoproteinemia (HLP III), in which increased plasma cholesterol and triglycerides are the consequence of impaired clearance of chylomicron and VLDL remnants.
Form	Lyophilized
Molecular Mass	36,154 Da
Purity	>90% by SDS-PAGE & HPLC analyses
Notes	Small volumes of ApoE3 recombinant protein may occasionally become entrapped in

the seal of the product vial during shipment and storage. If necessary, briefly centrifuge the vial on a tabletop centrifuge to dislodge any liquid in the container's cap. Certain products may require to ship with dry ice.

Warning

This product is for research use only. Not for use in diagnostic or therapeutic procedures.

GENE INFORMATION

Gene Name ApoE3

Official Symbol ApoE3

Synonyms APOE; APOE; AD2; LPG; LDLQC5; Apo-E;

Gene ID 348

mRNA Refseq NM_000041.2

Protein Refseq NP_000032.1

MIM 104310

UniProt ID P02649

Chromosome Location Chromosome: 19; NC_000019.10 (44905782..44909393). Location: 19q13.2

Function ?ApoE is essential for the normal catabolism of triglyceride-rich lipoprotein constituents. The APOE gene is mapped to chromosome 19 in a cluster with APOC1 and APOC2. Defects in apolipoprotein E result in familial dysbetalipoproteinemia, or
