

Recombinant Human Crystallin, Beta B1, His-tagged

Cat. No. CRYBB1-2495H **Lot. No.** (See product label)

SPECIFICATION

Product Overview	Recombinant human CRYBB1 protein, fused to His-tag at C-terminus was expressed in <i>E.coli</i> and purified by using conventional chromatography techniques. MW = 29.1 kDa (260aa).
Species	Human
Source	E.coli
Description	Crystallins are the major structural proteins of the vertebrate eye lens, where they maintain the transparency and refractive index of the lens. Crystallins are divided into α , β , and γ families. Since lens central fiber cells lose their nuclei during development, these crystallins are made and then retained throughout life, making them extremely stable proteins. CRYBB1 is a beta basic group member and undergoes extensive cleavage at its N-terminal extension during lens maturation.
Form	Liquid. In 20mM Tris-HCl buffer(pH 8.0) containing 10% glycerol 1mM DTT.
Purity	> 90% by SDS – PAGE.
Concentration	1 mg/ml (determined by Bradford assay).
