

Recombinant Canine CXCL10 (IP-10)

Cat. No. CXCL10-65C **Lot. No.** (See product label)

SPECIFICATION

Product Overview

Canine IP-10/CXCL10 was produced in yeast and therefore does not have endotoxin, is naturally folded, and post-translationally modified.

Species

Canine

Source

Yeast

Description

C-X-C motif chemokine 10 (CXCL10) also known as Interferon gamma-induced protein 10 (IP-10) or small-inducible cytokine B10 is a member of the C-X-C chemokine family. CXCL10 (IP-10) is secreted by several cell types in response to IFN-gamma. These cell types include monocytes, endothelial cells and fibroblasts. CXCL10 (IP-10) has been attributed to several roles, such as chemoattraction for monocytes/macrophages, T cells, NK cells, and dendritic cells, promotion of T cell adhesion to endothelial cells, antitumor activity, and inhibition of bone marrow colony formation and angiogenesis. There have been 17 different C-X-C chemokines described in mammals, that are subdivided into two categories, those with a specific amino acid sequence (or motif) of glutamic acid-leucine-arginine (or ELR for short) immediately before the first cysteine of the C-X-C motif (ELR-positive), and those without an ELR motif (ELR-negative). ELR-positive C-X-C chemokines specifically induce the migration of neutrophils, and interact with chemokine receptors CXCR1 and CXCR2. C-X-C chemokines that lack the ELR motif are chemoattractant for lymphocytes. CXCL10 (IP-10) elicits its effects by binding to the cell surface chemokine receptor CXCR3.

 45-1 Ramsey Road, Shirley, NY 11967, USA

Form	Lyophilized
Molecular Mass	8.6 kDa
AA Sequence	IPLSRTIRCT CIKISDQPVN LRSLEKIEMI PASPSCPHVE IIATMKKSGE KRCLNPESKT IKSLVKAISK KRSRRSP (77)
Applications	The Canine IP-10/CXCL10 protein can be used in cell culture, as an IP-10/CXCL10 ELISA Standard, and as a Western Blot Control.
Storage	-20 C
