Active Recombinant Canine GM-CSF

Cat. No. Csf2-94C **Lot. No.** (See product label)

SPECIFICATION

Product Overview	
Species	Canine
Source	Yeast
Description	Granulocyte-macrophage colony-stimulating factor (GM-CSF) is a protein secreted by macrophages, T cells, mast cells, NK cells, endothelial cells and fibroblasts. GM-CSF stimulates stem cells to produce granulocytes (neutrophils, eosinophils, and basophils) and monocytes. Granulocyte macrophage–colony stimulating factor (GM-CSF) is secreted in response to inflammatory stimuli such as LPS, IL-1, and TNF-α by a variety of different cells, including endothelium, fibroblasts, muscle cells, and macrophages, and by activated T cells. GM-CSF is glycosylated in its mature form.
Form	Lyophilized
Bio-activity	The biological activity of recombinant canine GM-CSF was measured in a cell proliferation assay using the human TF-1 cell line. The ED50 for this effect is typically 25 - 45 ng/mL.
Molecular Mass	14.2 kDa
