Cat. No. Mmp2-416M **Lot. No.** (See product label)

SPECIFICATION

Product Overview	A DNA sequence encoding the mouse Mmp2 (NP_032636.1) (Met409-Cys622) was expressed with a polyhistidine tag at the N-terminus.
Species	Human
Source	Human Cells
ProteinLength	409-622 a.a.
Description	72 kDa type IV collagenase also known as matrix metalloproteinase-2 (MMP-2) and gelatinase A is an enzyme that in humans is encoded by the MMP2 gene. Proteins of the matrix metalloproteinase (MMP) family are involved in the breakdown of extracellular matrix in normal physiological processes, such as embryonic development, reproduction, and tissue remodeling, as well as in disease processes, such as arthritis and metastasis. Most MMP's are secreted as inactive proproteins which are activated when cleaved by extracellular proteinases. This gene encodes an enzyme which degrades type IV collagen, the major structural component of basement membranes. The enzyme plays a role in endometrial menstrual breakdown, regulation of vascularization and the inflammatory response.
Predicted N Terminal	His
Form	Lyophilized from sterile PBS, pH 7.4.
Molecular Mass	The recombinant mouse Mmp2 consists 273 amino acids and predicts a molecular
