

Active Native Human Factor D

Cat. No. CFD-348H Lot. No. (See product label)

SPECIFICATION

Product Overview	Native Human Factor D was purified from human serum.
Species	Human
Source	Human Serum
Description	The protein encoded by this gene is a member of the trypsin family of peptidases. The encoded protein is a component of the alternative complement pathway best known for its role in humoral suppression of infectious agents. This protein is also a serine protease that is secreted by adipocytes into the bloodstream. Finally, the encoded protein has a high level of expression in fat, suggesting a role for adipose tissue in immune system biology.
