

Active Recombinant Human NGF, HlgG1 Fc-tagged, mutant

Cat. No. NGF-001H Lot. No. (See product label)

SPECIFICATION

Product Overview	The extracellular domain of human NGF(AAI26149.1)(Met1-Ala241) is fused to the N-terminus of the Fc region of mutant human IgG1 was expressed in CHO cell.
Species	Human
Source	CHO
ProteinLength	1-241 a.a.
Description	This gene is a member of the NGF-beta family and encodes a secreted protein which homodimerizes and is incorporated into a larger complex. This protein has nerve growth stimulating activity and the complex is involved in the regulation of growth and the differentiation of sympathetic and certain sensory neurons. Mutations in this gene have been associated with hereditary sensory and autonomic neuropathy, type 5 (HSAN5), and dysregulation of this gene's expression is associated with allergic rhinitis.
Form	Lyophilized from 0.2µm-filtered solution in PBS.
Bio-activity	Measured in a cell proliferation assay using TF-1 human erythroleukemic cells.
Molecular Mass	40KDa (monomer)
AA Sequence	Met1-Ala241
