

Recombinant Human FGF1 Protein

Cat. No. FGF1-038H **Lot. No.** (See product label)

SPECIFICATION

Product Overview	Recombinant human FGF1 protein without tag was expressed in E. coli.
Species	Human
Source	E.coli
ProteinLength	822
Description	The protein encoded by this gene is a member of the fibroblast growth factor (FGF) family. FGF family members possess broad mitogenic and cell survival activities, and are involved in a variety of biological processes, including embryonic development, cell growth, morphogenesis, tissue repair, tumor growth and invasion. This protein functions as a modifier of endothelial cell migration and proliferation, as well as an angiogenic factor. It acts as a mitogen for a variety of mesoderm- and neuroectoderm-derived cells in vitro, thus is thought to be involved in organogenesis. Multiple alternatively spliced variants encoding different isoforms have been described.
