

Recombinant Human CD93 Protein, His-tagged

Cat. No. CD93-110H **Lot. No.** (See product label)

SPECIFICATION

Product Overview	Recombinant human CD93 protein with His tag was expressed in HEK293.
Species	Human
Source	HEK293
ProteinLength	652
Description	The protein encoded by this gene is a cell-surface glycoprotein and type I membrane protein that was originally identified as a myeloid cell-specific marker. The encoded protein was once thought to be a receptor for C1q, but now is thought to instead be involved in intercellular adhesion and in the clearance of apoptotic cells. The intracellular cytoplasmic tail of this protein has been found to interact with moesin, a protein known to play a role in linking transmembrane proteins to the cytoskeleton and in the remodelling of the cytoskeleton.
Form	Lyophilized
