

Recombinant Human CD37 Protein, Fc-tagged

Cat. No. CD37-154H **Lot. No.** (See product label)

SPECIFICATION

Product Overview	Recombinant human CD37 protein with Fc tag was expressed in HEK293.
Species	Human
Source	HEK293
ProteinLength	281
Description	The protein encoded by this gene is a member of the transmembrane 4 superfamily, also known as the tetraspanin family. Most of these members are cell-surface proteins that are characterized by the presence of four hydrophobic domains. The proteins mediate signal transduction events that play a role in the regulation of cell development, activation, growth and motility. This encoded protein is a cell surface glycoprotein that is known to complex with integrins and other transmembrane 4 superfamily proteins. It may play a role in T-cell-B-cell interactions. Alternate splicing results in multiple transcript variants encoding different isoforms.
