

Recombinant Cynomolgus monkey IL4R Protein, His-tagged

Cat. No. IL4R-329C Lot. No. (See product label)

SPECIFICATION

Product Overview	Recombinant Cynomolgus monkey IL4R protein with His tag was expressed in HEK293.
Species	Cynomolgus
Source	HEK293
ProteinLength	825
Description	This gene encodes the alpha chain of the interleukin-4 receptor, a type I transmembrane protein that can bind interleukin 4 and interleukin 13 to regulate IgE production. The encoded protein also can bind interleukin 4 to promote differentiation of Th2 cells. A soluble form of the encoded protein can be produced by proteolysis of the membrane-bound protein, and this soluble form can inhibit IL4-mediated cell proliferation and IL5 upregulation by T-cells. Allelic variations in this gene have been associated with atopy, a condition that can manifest itself as allergic rhinitis, sinusitis, asthma, or eczema. Polymorphisms in this gene are also associated with resistance to human immunodeficiency virus type-1 infection. Alternate splicing results in multiple transcript variants.
