

Recombinant Full Length Human PTH1R Protein, His-tagged

Cat. No. PTH1R-420H **Lot. No.** (See product label)

SPECIFICATION

Product Overview	Recombinant human PTH1R protein with His tag was expressed in HEK293.
Species	Human
Source	HEK293
ProteinLength	593
Description	The protein encoded by this gene is a member of the G-protein coupled receptor family 2. This protein is a receptor for parathyroid hormone (PTH) and for parathyroid hormone-like hormone (PTHrP). The activity of this receptor is mediated by G proteins which activate adenylyl cyclase and also a phosphatidylinositol-calcium second messenger system. Defects in this receptor are known to be the cause of Jansen's metaphyseal chondrodysplasia (JMC), chondrodysplasia Blomstrand type (BOCD), as well as enchondromatosis. Two transcript variants encoding the same protein have been found for this gene.
