

Recombinant Human ROR1 Protein, His-tagged

Cat. No. ROR1-428H **Lot. No.** (See product label)

SPECIFICATION

Product Overview	Recombinant human ROR1 protein with His tag was expressed in HEK293.
Species	Human
Source	HEK293
ProteinLength	937
Description	This gene encodes a receptor tyrosine kinase-like orphan receptor that modulates neurite growth in the central nervous system. The encoded protein is a glycosylated type I membrane protein that belongs to the ROR subfamily of cell surface receptors. It is a pseudokinase that lacks catalytic activity and may interact with the non-canonical Wnt signalling pathway. This gene is highly expressed during early embryonic development but expressed at very low levels in adult tissues. Increased expression of this gene is associated with B-cell chronic lymphocytic leukaemia. Alternative splicing results in multiple transcript variants encoding different isoforms.
Form	Lyophilized
