

Recombinant Full Length Human SERPINH1 Protein, His-tagged

Cat. No. SERPINH1-576H **Lot. No.** (See product label)

SPECIFICATION

Product Overview	Recombinant human SERPINH1 protein with His tag was expressed in HEK293.
Species	Human
Source	HEK293
ProteinLength	1-418 a.a.
Description	This gene encodes a member of the serpin superfamily of serine proteinase inhibitors. The encoded protein is localized to the endoplasmic reticulum and plays a role in collagen biosynthesis as a collagen-specific molecular chaperone. Autoantibodies to the encoded protein have been found in patients with rheumatoid arthritis. Expression of this gene may be a marker for cancer, and nucleotide polymorphisms in this gene may be associated with preterm birth caused by preterm premature rupture of membranes. Alternatively spliced transcript variants have been observed for this gene, and a pseudogene of this gene is located on the short arm of chromosome 9.
