

Recombinant Human TFPI Protein, Biotinylated

Cat. No. TFPI-751H **Lot. No.** (See product label)

SPECIFICATION

Product Overview	Biotinylated Recombinant human TFPI protein without tag was expressed in HEK293..
Species	Human
Source	HEK293
ProteinLength	304
Description	This gene encodes a Kunitz-type serine protease inhibitor that regulates the tissue factor (TF)-dependent pathway of blood coagulation. The coagulation process initiates with the formation of a factor VIIa-TF complex, which proteolytically activates additional proteases (factors IX and X) and ultimately leads to the formation of a fibrin clot. The product of this gene inhibits the activated factor X and VIIa-TF proteases in an autoregulatory loop. Inhibition of the encoded protein restores hemostasis in animal models of hemophilia. This gene encodes multiple protein isoforms that differ in their inhibitory activity, specificity and cellular localization.
Form	Lyophilized
