

Recombinant Human ALB Protein

Cat. No. ALB-778H **Lot. No.** (See product label)

SPECIFICATION

Product Overview	Recombinant human ALB protein without tag was expressed in HEK293.
Species	Human
Source	HEK293
ProteinLength	609
Description	This gene encodes the most abundant protein in human blood. This protein functions in the regulation of blood plasma colloid osmotic pressure and acts as a carrier protein for a wide range of endogenous molecules including hormones, fatty acids, and metabolites, as well as exogenous drugs. Additionally, this protein exhibits an esterase-like activity with broad substrate specificity. The encoded preproprotein is proteolytically processed to generate the mature protein. A peptide derived from this protein, EPI-X4, is an endogenous inhibitor of the CXCR4 chemokine receptor.
