

Recombinant Human CHIT1 Protein

Cat. No. CHIT1-787H **Lot. No.** (See product label)

SPECIFICATION

Product Overview	Recombinant human CHIT1 protein without tag was expressed in HEK293.
Species	Human
Source	HEK293
ProteinLength	466
Description	Chitotriosidase is secreted by activated human macrophages and is markedly elevated in plasma of Gaucher disease patients. The expression of chitotriosidase occurs only at a late stage of differentiation of monocytes to activated macrophages in culture. Human macrophages can synthesize a functional chitotriosidase, a highly conserved enzyme with a strongly regulated expression. This enzyme may play a role in the degradation of chitin-containing pathogens. Several alternatively spliced transcript variants have been described for this gene.
Form	Lyophilized
Molecular Mass	51.3 kDa
