

Recombinant Human HAO1 Protein

Cat. No. HAO1-796H **Lot. No.** (See product label)

SPECIFICATION

Product Overview	Recombinant human HAO1 protein without tag was expressed in HEK293.
Species	Human
Source	HEK293
ProteinLength	370
Description	This gene is one of three related genes that have 2-hydroxyacid oxidase activity yet differ in encoded protein amino acid sequence, tissue expression and substrate preference. Subcellular location of the encoded protein is the peroxisome. Specifically, this gene is expressed primarily in liver and pancreas and the encoded protein is most active on glycolate, a two-carbon substrate. The protein is also active on 2-hydroxy fatty acids. The transcript detected at high levels in pancreas may represent an alternatively spliced form or the use of a multiple near-consensus upstream polyadenylation site.
Form	Lyophilized
Molecular Mass	41.7 kDa
