

Recombinant Human MMP9 Protein, His-tagged

Cat. No. MMP9-801H **Lot. No.** (See product label)

SPECIFICATION

Product Overview	Recombinant human MMP9 protein with His tag was expressed in HEK293.
Species	Human
Source	HEK293
Description	Proteins of the matrix metalloproteinase (MMP) family are involved in the breakdown of extracellular matrix in normal physiological processes, such as embryonic development, reproduction, and tissue remodeling, as well as in disease processes, such as arthritis and metastasis. Most MMP's are secreted as inactive proproteins which are activated when cleaved by extracellular proteinases. The enzyme encoded by this gene degrades type IV and V collagens. Studies in rhesus monkeys suggest that the enzyme is involved in IL-8-induced mobilization of hematopoietic progenitor cells from bone marrow, and murine studies suggest a role in tumor-associated tissue remodeling.
