

Recombinant Human PLA2G1B Protein

Cat. No. PLA2G1B-832H **Lot. No.** (See product label)

SPECIFICATION

Product Overview	Recombinant human PLA2G1B protein without tag was expressed in HEK293.
Species	Human
Source	HEK293
ProteinLength	148
Description	This gene encodes a secreted member of the phospholipase A2 (PLA2) class of enzymes, which is produced by the pancreatic acinar cells. The encoded calcium-dependent enzyme catalyzes the hydrolysis of the sn-2 position of membrane glycerophospholipids to release arachidonic acid (AA) and lysophospholipids. AA is subsequently converted by downstream metabolic enzymes to several bioactive lipophilic compounds (eicosanoids), including prostaglandins (PGs) and leukotrienes (LTs). The enzyme may be involved in several physiological processes including cell contraction, cell proliferation and pathological response.
