

Recombinant Human AGER Protein, Fc-tagged

Cat. No. AGER-833H **Lot. No.** (See product label)

SPECIFICATION

Product Overview	Recombinant human AGER protein with Fc tag was expressed in HEK293.
Species	Human
Source	HEK293
ProteinLength	404
Description	The advanced glycosylation end product (AGE) receptor encoded by this gene is a member of the immunoglobulin superfamily of cell surface receptors. It is a multiligand receptor, and besides AGE, interacts with other molecules implicated in homeostasis, development, and inflammation, and certain diseases, such as diabetes and Alzheimer's disease. Many alternatively spliced transcript variants encoding different isoforms, as well as non-protein-coding variants, have been described for this gene (PMID:18089847).
Form	Lyophilized
Molecular Mass	60.8 kDa
