Cat. No. NEK6-0907H **Lot. No.** (See product label)

SPECIFICATION

Product Overview	Recombinant Human GG-NEK6(A2-T313 end) Protein was expressed in Insect cell.
Species	Human
Source	Insect Cells
ProteinLength	A2-T313
Description	Protein kinase which plays an important role in mitotic cell cycle progression. Required for chromosome segregation at metaphase-anaphase transition, robust mitotic spindle formation and cytokinesis. Phosphorylates ATF4, CIR1, PTN, RAD26L, RBBP6, RPS7, RPS6KB1, TRIP4, STAT3 and histones H1 and H3. Phosphorylates KIF11 to promote mitotic spindle formation. Involved in G2/M phase cell cycle arrest induced by DNA damage. Inhibition of activity results in apoptosis. May contribute to tumorigenesis by suppressing p53/TP53-induced cancer cell senescence. Phosphorylates EML4 at 'Ser-144', promoting its dissociation from microtubules during mitosis which is required for efficient chromosome congression.
Form	Liquid
Endotoxin	< 0.01 EU per µg of the protein
