

Recombinant Human PAK5 Protein (M1-H719), Tag Free

Cat. No. PAK5-1106H **Lot. No.** (See product label)

SPECIFICATION

Product Overview	Recombinant Human PAK5(M1-H719 end) Protein was expressed in E. coli.
Species	Human
Source	E.coli
ProteinLength	M1-H719
Description	Serine/threonine protein kinase that plays a role in a variety of different signaling pathways including cytoskeleton regulation, cell migration, proliferation or cell survival. Activation by various effectors including growth factor receptors or active CDC42 and RAC1 results in a conformational change and a subsequent autophosphorylation on several serine and/or threonine residues. Phosphorylates the proto-oncogene RAF1 and stimulates its kinase activity. Promotes cell survival by phosphorylating the BCL2 antagonist of cell death BAD. Phosphorylates CTNND1, probably to regulate cytoskeletal organization and cell morphology. Keeps microtubules stable through MARK2 inhibition and destabilizes the F-actin network leading to the disappearance of stress fibers and focal adhesions.
Form	Liquid
Endotoxin	< 0.01 EU per µg of the protein
Purity	90%
