

Recombinant Human UBE3A Protein, C-His tagged (Isoform I)

Cat. No. UBE3A-35H **Lot. No.** (See product label)

SPECIFICATION

Product Overview	Recombinant Human UBE3A Protein (Isoform I) with C-His tag was expressed in HEK293.
Species	Human
Source	HEK293
Description	This gene encodes an E3 ubiquitin-protein ligase, part of the ubiquitin protein degradation system. This imprinted gene is maternally expressed in brain and biallelically expressed in other tissues. Maternally inherited deletion of this gene causes Angelman Syndrome, characterized by severe motor and intellectual retardation, ataxia, hypotonia, epilepsy, absence of speech, and characteristic facies. The protein also interacts with the E6 protein of human papillomavirus types 16 and 18, resulting in ubiquitination and proteolysis of tumor protein p53. Alternative splicing of this gene results in three transcript variants encoding three isoforms with different N-termini. Additional transcript variants have been described, but their full length nature has not been determined.
Molecular Mass	99 kDa

Purity > 90% by SDS-PAGE

Storage Store it under sterile conditions at -20 to -80 centigrade. It is recommended that the protein be aliquoted for optimal storage. Avoid repeated freeze-thaw cycles.

Concentration 0.57 mg/mL by BCA

Storage Buffer PBS, pH7.4

GENE INFORMATION

Gene Name UBE3A ubiquitin protein ligase E3A [Homo sapiens (human)]

Official Symbol UBE3A

Synonyms UBE3A; ubiquitin protein ligase E3A; AS; ANCR; PIX1; E6-AP; HPVE6A; EPVE6AP; ubiquitin-protein ligase E3A; CTCL tumor antigen se37-2; E6AP ubiquitin-protein ligase; HECT-type ubiquitin transferase E3A; human papilloma virus E6-associated protein; human papillomavirus E6-associated protein; oncogenic protein-associated
