

Recombinant Human BRD4 Protein (44-460), N-His tagged

Cat. No. BRD4-05H Lot. No. (See product label)

SPECIFICATION

Product Overview	Human recombinant BRD4, tandem construct comprising bromodomains 1 and 2 (residues 44-460; Genbank Accession # NM_058243; MW = 49.7 kDa) expressed in E. coli with an N-terminal His-tag.
Species	Human
Source	E.coli
ProteinLength	44-460
Description	The protein encoded by this gene is homologous to the murine protein MCAP, which associates with chromosomes during mitosis, and to the human RING3 protein, a serine/threonine kinase. Each of these proteins contains two bromodomains, a conserved sequence motif which may be involved in chromatin targeting. This gene has been implicated as the chromosome 19 target of translocation t(15;19)(q13;p13.1), which defines an upper respiratory tract carcinoma in young people. Two alternatively spliced transcript variants have been described.
Molecular Mass	49.7 kDa
Purity	> 90% by SDS-PAGE
Storage	At -80 centigrade, aliquot and snap-freeze after first use.
Storage Buffer	Solution of purified recombinant protein in 50 mM Tris/HCl, pH 7.5, 500 mM NaCl, 1.0
