

Recombinant Human Di-Ubiquitin Protein (Non-Cleavable Linear), 6×His-tagged

Cat. No. Di-Ubiquitin-47H **Lot. No.** (See product label)

SPECIFICATION

Product Overview	Recombinant Human Di-Ubiquitin Protein (Non-Cleavable Linear) with 6×His tag was expressed in E. coli. Recombinant linear chains of defined length expressed in E. coli and purified to homogeneity. Amide linkages join the N- and C-terminus of each ubiquitin molecule to each other. This molecule is His-tagged at the N-terminus of the most distal ubiquitin.
Species	Human
Source	E.coli
Description	A wide range of cellular processes are modulated through the generation and attachment of polyubiquitin (polyUb) chains to target proteins. Increasing evidence suggests that polyUb chains joined through linear peptide bonds between the C-terminus of a ubiquitin and the N-terminus of another play important functional roles. The enzyme machinery responsible for the generation of linear polyUb chains has been termed LUBAC, consisting of HOIL-1L and HOIP. Chains of these type have an open conformation, similar to polyUb K63, but with very distinct functional properties. Linear polyUb chains are cleaved by the deubiquitylases CYLD, USP5 (IsoT), USP2 and have been shown to bind to many UBDs including NEMO and Trabin-n (3xnzf). These specific chains are not cleaved by the linear specific deubiquitylase Otulin and have applications as a control.
Molecular Mass	17,786.2 Da

 Email: info@creative-biomart.com  Fax: 1-631-938-8127

 45-1 Ramsey Road, Shirley, NY 11967, USA

Storage	At -80 centigrade, avoid freeze/thaw cycles
----------------	---

Storage Buffer	20 mM Tris pH 7.5, 150 mM NaCl, 1 mM EDTA
-----------------------	---

GENE INFORMATION

Official Symbol	Di-Ubiquitin
------------------------	--------------

Synonyms	Di-Ubiquitin; Ub2
-----------------	-------------------
