

Recombinant Human CNTFR Protein (23-342aa), C-His-tagged

Cat. No. CNTFR-12H **Lot. No.** (See product label)

SPECIFICATION

Product Overview	Recombinant human CNTFR (23-342aa), fused to His-tag at C-terminus, was expressed in insect cell and purified by using conventional chromatography techniques
Species	Human
Source	Insect Cells
ProteinLength	23-342
Description	This gene encodes a member of the type 1 cytokine receptor family. The encoded protein is the ligand-specific component of a tripartite receptor for ciliary neurotrophic factor, which plays a critical role in neuronal cell survival, differentiation and gene expression. Binding of ciliary neurotrophic factor to the encoded protein recruits the transmembrane components of the receptor, gp130 and leukemia inhibitory factor receptor, facilitating signal transduction. Single nucleotide polymorphisms in this gene may be associated with variations in muscle strength, as well as early onset of eating disorders. Alternatively spliced transcript variants have been observed for this gene.
