

Recombinant Human KLF1 Protein, His-tagged

Cat. No. KLF1-01H **Lot. No.** (See product label)

SPECIFICATION

Product Overview	Recombinant Human KLF1 Protein with His tag was expressed in E. coli.
Species	Human
Source	E.coli
Description	This gene encodes a hematopoietic-specific transcription factor that induces high-level expression of adult beta-globin and other erythroid genes. The zinc-finger protein binds to the DNA sequence CCACACCCT found in the beta hemoglobin promoter. Heterozygous loss-of-function mutations in this gene result in the dominant In(Lu) blood phenotype.
