

Recombinant Human SLC7A11 Protein

Cat. No. SLC7A11-11H **Lot. No.** (See product label)

SPECIFICATION

Product Overview	Recombinant Human SLC7A11 Protein without tag was expressed in E. coli.
Species	Human
Source	E.coli
Description	This gene encodes a member of a heteromeric, sodium-independent, anionic amino acid transport system that is highly specific for cysteine and glutamate. In this system, designated Xc(-), the anionic form of cysteine is transported in exchange for glutamate. This protein has been identified as the predominant mediator of Kaposi sarcoma-associated herpesvirus fusion and entry permissiveness into cells. Also, increased expression of this gene in primary gliomas (compared to normal brain tissue) was associated with increased glutamate secretion via the XCT channels, resulting in neuronal cell death.
Molecular Mass	The protein has a calculated MW of 58 kDa, it is speculated that the protein forms a dimeric structure (116 kDa).
