

Active Recombinant Human FGF1 Protein (Carry Free-Lyophilized, 140 amino acid)

Cat. No. FGF1-12H Lot. No. (See product label)

SPECIFICATION

Product Overview	Recombinant Human FGF1 Protein (Carry Free-Lyophilized) without tag was expressed in E. coli.
Species	Human
Source	E.coli
ProteinLength	140 amino acid
Description	The protein encoded by this gene is a member of the fibroblast growth factor (FGF) family. FGF family members possess broad mitogenic and cell survival activities, and are involved in a variety of biological processes, including embryonic development, cell growth, morphogenesis, tissue repair, tumor growth and invasion. This protein functions as a modifier of endothelial cell migration and proliferation, as well as an angiogenic factor. It acts as a mitogen for a variety of mesoderm- and neuroectoderm-derived cells in vitro, thus is thought to be involved in organogenesis. Multiple alternatively spliced variants encoding different isoforms have been described.
Form	Lyophilized
Bio-activity	ED50 < 0.1 ng/mL as determined by its ability to the dose dependent proliferation of mouse Balb/c 3T3 cells.

Storage	It is stable for up to 6 months from date of receipt when stored at -20 centigrade. Multiple freeze/thaw cycles should be avoided as it can result in significant loss of activity.
Storage Buffer	Sterile filtered through a 0.2 micron filter. Lyophilized with no additives.
Reconstitution	Centrifuge the vial before opening. Reconstitute in sterile water to a concentration of 0.1 -1.0 mg/mL. Do not vortex. For extended storage, it is recommended to further dilute in a buffer containing a carrier protein (example 0.1% BSA) and store in working aliquots at -20 to -80 centigrade.
Shipping	This product is shipped at 4 centigrade with cold pack.
