

Recombinant Human Chloride Intracellular Channel 1, His-tagged

Cat. No. CLIC1-2498H **Lot. No.** (See product label)

SPECIFICATION

Product Overview	Recombinant human CLIC1 protein, fused to His-tag at N-terminus, was expressed in <i>E.coli</i> and purified by using conventional chromatography techniques. MW = 29.0 kDa (261aa).
Species	Human
Source	E.coli
Description	CLIC1 (Chloride intracellular channel 1), also referred to as NCC27, is a member of the highly conserved family of chloride ion channels that function in both soluble and integral membrane forms. This protein is a monomeric protein that contains a redox-active site similar to glutaredoxin; it functions as an anion-selective channel. It forms a dimer when oxidized and is then able to form chloride ion channels in bilayers and vesicles, whereas a reducing environment prevents this from occurring.
Form	Liquid. 20mM Tris-HCl buffer (pH8.0) containing 10% glycerol 0.1M NaCl.
Purity	> 90% by SDS – PAGE.
Concentration	1.0 mg/ml (determined by Bradford assay).
