

Recombinant Full Length Human CDH11 Protein, Flag-tagged

Cat. No. CDH11-13HCL **Lot. No.** (See product label)

SPECIFICATION

Product Overview	Recombinant protein of human cadherin 11, type 2, OB-cadherin (osteoblast) (CDH11) with a Flag tag was expressed in HEK293T.
Species	Human
Source	HEK293
Description	This gene encodes a type II classical cadherin from the cadherin superfamily, integral membrane proteins that mediate calcium-dependent cell-cell adhesion. Mature cadherin proteins are composed of a large N-terminal extracellular domain, a single membrane-spanning domain, and a small, highly conserved C-terminal cytoplasmic domain. Type II (atypical) cadherins are defined based on their lack of a HAV cell adhesion recognition sequence specific to type I cadherins. Expression of this particular cadherin in osteoblastic cell lines, and its upregulation during differentiation, suggests a specific function in bone development and maintenance.
